Claim Objections

1. As best understood, the control signal recited in claim 3 is directed toward V_{hs} (Fig. 6). There is no antecedent basis for "the control signal". Examiner suggests "the control signal" be replaced with --a charge pump output signal--.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 10 and 11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contains subject matter that was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

As was pointed out in the Advisory Action mailed 2/14/06, claims 10 and 11 are not properly enabled. Amended base claim 1 is directed toward a digital voltage regulator as disclosed in Applicant's Fig. 6. Dependent claims 10 and 11 are directed toward an analog voltage regulator as disclosed in Applicant's Fig. 5. Applicant's disclosure does not show or suggest a combination of digital and analog voltage regulators as is required by claims 10 and 11.

Conclusion

4. Claims 1, 4-9, 14-20, 22-26 and 28 appear to be allowable over the Prior Art of record. Assuming the objection to claim 3 is addressed, claim 3 appears to be allowable over the Prior Art of record.
